

PRODUCT CATALOGUE

ENGINEERED FOR PERFECT CONNECTIONS

About Us

Cable Xperts Limited is a proudly Kenyan manufacturer and distributor of high-quality cables and wiring solutions. We don't just supply we make. Engineered for performance. Made in Kenya. Built to power homes, businesses and industries across the nation and beyond.

Our Mission

To design, manufacture and deliver reliable, safe and innovative cable solutions that exceed customer expectations through local expertise, continuous improvement and uncompromising quality.
MADE IN KENYA. TRUSTED EVERYWHERE.

Our Vision

To be East Africa's most trusted cable brand, recognized for quality, innovation and nation-building.
MADE IN KENYA. BUILT FOR THE FUTURE.

Core Values

- ★ Professionalism
- ★ Performance Guarantee
- ★ Innovation
- ★ Safety

SUBMERSIBLE CABLES

01

The conductors are made from high-quality, multi-stranded annealed copper. The fine strands ensure flexibility and easy installation in narrow boreholes while providing excellent electrical conductivity for consistent power delivery.

ARMoured CABLES

02

Armoured cables typically use copper or aluminium conductors, available in single-core or multi-core configurations. Copper offers superior conductivity, while aluminium provides a lightweight and cost-effective alternative for longer runs.

TWIN WITH EARTH

03

Twin with Earth are designed for internal wiring in residential, commercial, and light industrial buildings. They are ideal for power and lighting circuits where an earth connection is required for enhanced safety. These cables are suitable for use in conduits, trunking, or surface mounting.

FLEXIBLE CABLES

04

Flexible cables feature fine multi-stranded copper conductors that provide excellent flexibility and conductivity. The fine stranding allows the cable to bend easily without breaking, making it suitable for dynamic and mobile installations.

OVERHEAD CONDUCTORS

05

Overhead conductors are typically made from aluminium, aluminium alloy, or aluminium reinforced with steel (e.g., ACSR - Aluminium Conductor Steel Reinforced). Aluminium is used due to its lightweight and good conductivity, while steel core reinforcement provides mechanical strength for longer spans and resistance to sag.

WELDING CABLES

06

Welding cables feature high-strand-count copper conductors that provide maximum flexibility and excellent conductivity. The fine copper strands allow the cable to bend and twist easily, making it ideal for dynamic work environments where maneuverability is crucial.

DOMESTIC CABLES

07

The conductors are made of high-quality annealed copper, either single-stranded or multi-stranded, depending on the cable type. Copper is chosen for its excellent conductivity, ensuring efficient power transmission with minimal energy loss.

TWIN FLAT

08

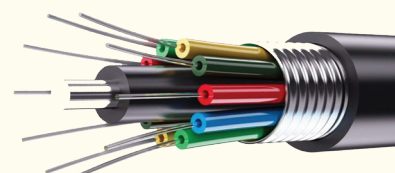

The conductors are made of high-quality annealed copper, either single-stranded or multi-stranded, depending on the cable type. Copper is chosen for its excellent conductivity, ensuring efficient power transmission with minimal energy loss.

FIBRE OPTIC CABLE

09

Resheating, Branding And Metering

We look forward to assisting you with your cable supply needs. Whether you're an individual looking for a home solution or a business with large-scale infrastructure requirements, Cable Xperts Limited is here to provide the best quality and service.
